Valuation for Traditional Retail Insurance Replacement

Item 1

One, 18ct yellow gold, gem set, multistone ring, of cast construction.

Plain, narrow, half round band of 3.68mm width (at base) x 1.17mm depth, with open back settings, and a cut out curved undertrail.

Feature domed shaped ring, housing a total of seventy-nine natural sapphires, spanning across the top of the band. The sapphires graduate in size, largest to the centre, and are pave set. The settings are secured between the tapering shoulders, of the plain and polished band.

Polished finish.

Stamped 'LEVIAN 18K illegible stamp' - acid tested as 18 carat gold.

Ring size: N.

The ring contains:

Seventy Nine pave set round natural sapphires, colour is "yellow".

Dimensions = 1.84mm(Dia) x 1.12mm(D-estimated) (smallest)

Dimensions = 2.54mm(Dia) x 1.55mm(D-estimated) (largest)

Total Weight = 3.50ct (estimated - see NOTE below)

Total Item Weight = 10.43 grams

Total Gemstone Weight = 3.50ct

Total Metal Weight = 9.73 grams (estimated)

NOTE: Due to setting constraints, limited testing indicates that the corundum may be beryllium bulk diffusion treated. However, this can only be verified if the stone is removed from the setting and sent to a major laboratory for full chemical analysis which is the only way this type of treatment can be accurately identified. Also, due to setting constraints, the exact dimensions of the gemstones cannot be ascertained. Therefore, weights of the gemstones are very much estimated. For accurate testing, weights, colour, and clarity gradings, the gemstones require removal from the settings. The below replacement figure is based upon crafting a similar ring employing similar materials and techniques being for a retail insurance purpose only. This figure does not represent the previous selling price of the item and will not be indicative of the resale value of the item.
